DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of claims 1-2 in the reply filed on 11/20/2006 is acknowledged.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Applicant claims that the solid electrolyte layer consists a two layer structure comprising a first electrolyte layer made of ceria based oxide material and a second electrolyte layer made of a lanthanum gallate based oxide material. Applicant is inconsistent when using the term "consists" because this narrow term is followed by a broader term "comprising". Examiner is interpreting the claim as the solid electrolyte layer comprising a first electrolyte layer made of ceria based oxide material and a second electrolyte layer made of a lanthanum gallate based oxide material.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 1745

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Yasuda et al. (JP 2001-351646 english translation).

As to claim 1, Yasuda et al. discloses a solid oxide fuel cell (figure 1, abstract) provided with a power cell formed by arranging a fuel electrode (figure 1 number 4, paragraph 0019) on one surface of a solid electrolyte layer and an air electrode layer (figure 1 number 8 paragraph 0019) on the other surface thereof wherein, the solid electrolyte layer comprising of a two layer (figure 1 number 6 and 10) comprising a first electrolyte layer made of ceria based oxide (figure 1 number 10 paragraph 0019) material and a second electrolyte layer made of a lanthanum gallate based oxide material (figure 1 number 6 paragraph 0019), and the second electrolyte layer is formed on the side of the air electrode layer (figure 1 number 6 and 8).

As to claim 2, Yasuda et al. discloses that the first electrolyte layer is formed thinner (figure 1 number 10) than the second electrolyte layer (figure 1 number 6).
